Education

Hangzhou Dianzi University B.S. in Computer Science and Technology Aug 2022 - Jun 2026

Experience

Siorigin - Agentic Infra (Kernel-Gen Agent) Jul 2026 - Present

Designed the task contract, verification flow and evaluation rubric for a kernel-generation agent that autonomously generates, validates and tunes operators for internal workloads; it reaches the published state of the art on FlashInfer benchmarks.

- **Task contract**: the target operator, constraints and promotion criteria are fixed as the agent's per-round input, so the objective does not drift over a long loop.
- **Verification**: after every change, numerical comparison against a PyTorch reference, then scoring on measured latency and achieved bandwidth — both gates required before the next round.
- **Search and context**: candidates, profiling evidence and the promotion decision are recorded each round; failure reasons feed the next round and only useful evidence is kept, bounding context growth. Iteration caps and regression rejection keep the agent from repeating ineffective attempts.
- **Delivery**: internal users supply only an operator and a reference implementation, and get back a validated kernel.

Alibaba - Amap (Intern) Oct 2025 - Jan 2026

Responsible for productionizing the Order Analysis Assistant and AI Ride-Hailing LLM projects, improving complex task handling and integrating shared AI capabilities.

- On the Order Analysis Assistant, designed and launched Deep Research, improving complex task decomposition and handling stability in long-context scenarios.
- Participated in the cold start of AI Ride-Hailing, building unified and stable AI invocation interfaces to keep the core path reliably integrated.

Tencent - Ads ChatBI System (Intern) Apr 2025 - Sep 2025

Natural-language data query system for content business users. Grounded in a metrics platform as its knowledge source, it fills DSL templates step by step through multi-turn clarification and multi-path retrieval with reranker re-ranking and popularity weighting, suppressing hallucination; a bad-case to fine-tuning to ICL hot-fix loop drives continuous improvement, with a state machine providing crash recovery.

Open Source

LangChain4j (12k+ stars) contributor — Java ecosystem AI framework; community issue fixes and capability improvements.

Technical Skills

- **AI Infra**: Transformer architecture and KV Cache; agent context management, multi-agent collaboration patterns, harness design and eval systems, with hands-on GPU kernel generation and tuning.
- **CS Fundamentals**: Solid OS and networking fundamentals — memory management (page tables), system calls, thread scheduling, TCP/UDP and congestion control.
- **Java & Engineering**: JVM class loading, memory model and G1/ZGC; Synchronized, Volatile, AQS and thread-pool internals; SQL optimization, MySQL tuning and production troubleshooting.

教育经历

杭州电子科技大学 计算机科学与技术 · 本科 2022 年 08 月 - 2026 年 06 月

工作经历

紫荆芯界 - Agentic Infra（Kernel-Gen Agent） 2026 年 07 月 - 至今

面向内部业务负载的 kernel 生成 agent：agent 自主完成算子生成、校验与调优，负责设计其任务契约、验证流程与评测口径，在 FlashInfer benchmark 上达到业界 SOTA 水平。

- **任务契约**：明确目标算子、约束与准入标准，作为 agent 每轮工作的固定输入，避免目标在长循环中漂移。
- **验证流程**：每轮改动后自动与 PyTorch 参考实现数值对拍，通过后再按实测延迟与有效带宽打分，两道关卡都过才进入下一轮。
- **搜索与上下文**：候选、profiling 证据与采纳结论逐轮落档，失败原因回灌为下一轮输入，只保留有效信息以控制上下文增长；配合迭代上限与性能回退拒绝，避免重复无效尝试。
- **内部交付**：业务侧只需提供算子与参考实现，即可拿到通过校验的 kernel。

阿里巴巴 - 高德地图（实习） 2025 年 10 月 - 2026 年 01 月

负责“订单分析助手”与“AI 打车”的大模型工程化落地，提升复杂任务处理能力并完成统一 AI 能力接入。

- 在订单分析助手项目中，设计并落地 Deep Research 功能，提升复杂任务拆解效果与长上下文场景下的处理表现。
- 参与 AI 打车服务冷启动，建设统一、稳定的 AI 调用接口，保障核心链路稳定接入。

腾讯 - 广告 ChatBI 系统（实习） 2025 年 04 月 - 2025 年 09 月

服务内容业务人员的自然语言取数系统：以指标中台为知识源，经多轮澄清、多路召回（reranker 重排 + 热度加权）与 DSL 逐级填充生成模板化 DSL，抑制幻觉；并以 bad case 回流 + ICL 热修复持续迭代，状态机保障宕机恢复。

开源经历

LangChain4j（12k+ Star）贡献者，Java 生态 AI 开发框架，参与社区问题修复与能力完善。

专业技能

- **AI Infra**：理解 Transformer 架构与 KV Cache；熟悉 Agent 上下文管理、Multi-Agent 协作范式、harness 设计与 eval 体系，有 GPU kernel 生成与调优实践
- **计算机基础**：扎实的操作系统与网络基础，理解内存管理（页表）、System Call、线程调度、TCP/UDP 与拥塞控制
- **Java 与工程实践**：熟悉 JVM 类加载机制、内存模型与 G1/ZGC，理解 Synchronized、Volatile、AQS 与线程池实现；有 SQL 优化、MySQL 调优与线上故障排查经验
